Findings — four views of the same run

The same findings counted four different ways; each row uses its own denominator so no number is the sum of two others by accident. Class- and model-level findings are kept separate from per-element ones.

View	Headline counts
By rule × element	Pass 13 · Fail 1 · Inconclusive 5 · Needs human review 0 · Not applicable 0 · Unsupported 0
By rule	Evaluated 7 · Skipped 2 · Any Fail 1 · Any needs human review 0
By element	Checked 8 · Not checked 0 · Any Fail 1 · Any needs human review 0
Class & model findings	Pass 0 · Fail 0 · Inconclusive 1 · Not applicable 2

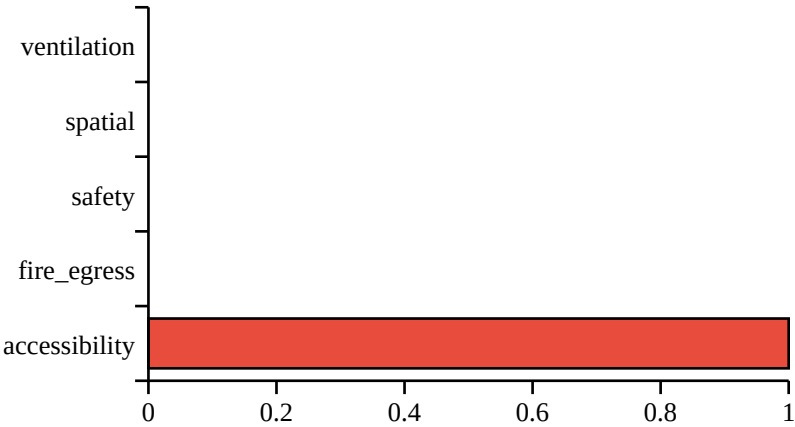

Waivers and Deviations

The status never flips — a waived FAIL stays FAIL with the waiver record shown as evidence. An invalid waiver is no longer in force (past expiry date, rule version changed, occasion exhausted, or identity mismatch). A superseded waiver is one whose underlying check now passes, so the waiver no longer applies.

FAIL (open)	1	FAIL (waived)	0
Waiver invalid	0	Waiver superseded	0
